FT2 –Colab Based Assessment

Nithyakani P • Sep 24

15 points

Total Marks: 15
Submission: Google Colab → PDF
Last Date: 27.09.2026

Complete the following 8 exercises in Google Colab:
1. Change CAPM beta and observe the expected return.
2. Add a third factor to the APT example.
3. Change the LP returns and constraints and solve again.
4. Compare integer and continuous LP solutions.
5. Replace matrix A and solve the system again.
6. Apply Cholesky decomposition to a covariance matrix from the dataset.
7. Fit linear and quadratic models and compare the errors.
8. Use root_scalar with bisect and brentq for another nonlinear financial equation.

Instructions :
* Run all programs and include the code, output, and a short observation.
* Make sure all 8 exercises are completed before submission.
* In Colab, select File → Print → Save as PDF.
* Submit the PDF on or before 27.09.2026.
